Computer-mediated Communication

Related Faculty

Morgan Ames
Alumni (MIMS 2006)
Assistant Professor of Practice

Science and technology studies;
computer-supported cooperative work
and social computing; education;
anthropology; youth technocultures;
ideology and inequity; critical data
science

Jenna Burrell
Adjunct Professor

how systematically excluded communities
adopt technology and adapt it to their
needs, human control over algorithms,
ethnography

Coye Cheshire
Professor

Trust, social exchange, social psychology,
and information exchange

Niloufar Salehi
Assistant Professor

Research Areas

► **Computer-mediated Communication**

- Data Science
- Design
- Entrepreneurship
- Human-computer Interaction (HCI)
- Information Economics
- Information Organization
- Information Policy
- Information Retrieval & Search
- Information Visualization
- Law
- Privacy
- Security
- Social & Cultural Studies
- Technology for Developing Regions
- User Experience Research

December 17, 2021

For a small portion of U.S. schoolchildren and their teachers, going to school online was the norm even before the COVID-19 pandemic forced a mass shift to remote learning.

Mind-Reading and Telepathy for Beginners and Intermediates: What People Think Machines Can Know About the Mind, and Why Their Beliefs Matter

December 15, 2018

What can machines know about the mind? This dissertation seeks to understand people’s *beliefs* about this question: how these beliefs affect and arise from interactions with digital sensors, from prior beliefs about the mind and the body; and how these beliefs may shape the design of technical systems in the future.

The purpose of this dissertation is twofold. First, it surfaces that the boundary between sensing bodies and sensing minds is unstable, deeply entangled with social context and beliefs about the body and mind. Second, it proposes the porousness of this boundary as a site for studying the role that biosensing devices will play in near future. As biosensors creep into smart watches, bands, and ingestibles, their ability to divine not just what these bodies do, but what they think and feel, presents an under-explored avenue for understanding and imagining how these technologies will come to matter in the course of life.
